

A digital imaging pioneer and projector industry leader, Digital Projection International (DPI) manufactures and distributes an extensive and expanding line of ultra high-performance 3-chip and single-chip DLP® projection systems. These projectors are the reference standard for demanding applications such as large-venue, live-event staging, Fortune 5000, homeland security, education, medical and scientific research, command and control, digital cinema, commercial entertainment, worship and elite home theater.

Multiple company accolades include two Emmy® Awards for Outstanding Achievement in Engineering Development by the Academy of Television Arts and Sciences. DPI remains the first and only projector manufacturer to win the coveted award.

With projector resolutions ranging from 1080p, WUXGA, sx+ and 720p, Digital Projection has over 70 precision projectors in its varying line-up. Recognized with numerous awards in the commercial AV channel and Home Cinema channel alike, DPI's projectors have won both infoComm and CEDIA association awards for their efficient performance and imaging precision.

Recently, Digital Projection International and Mechdyne Corporation developed a turnkey 3D entertainment system, complete with custom media server, designed to provide a range of 3D content for home cinema applications. A powerful Windows based server is the heart of the Total 3D Experience System, which also utilizes the most advanced active 3D glasses available. When paired with one of Digital Projection's 3D projectors, the Total 3D Experience System presents 1080p images at 120Hz, creating the most dynamic, large scale, high resolution 3D entertainment imaginable.

Additionally, Digital Projection International announced that a limited supply of their brand-new M-Vision Cine LED projectors is now available for order. The single-chip M-Vision Cine LED projector adds the first Lifetime Illumination™ display to DPI's already extensive single-chip product line.

Specialties
